Within the Division of Pediatric Dentistry at the University of Pennsylvania School of Dental Medicine, our mission is to:

› educate the next generation of pediatric dentists,
› provide preventive and comprehensive dental care for infants, children, and adolescents in a fun and loving environment,
› teach our young patients and their families about the importance of oral health, and
› provide a dental home for every child, including children with special health care needs.

Affordable, Quality Care

› Care is provided by dental students and pediatric dentistry residents under the supervision of faculty specially trained in pediatric dentistry. In addition, we work with other dental specialists at Penn Dental Medicine so that all your child’s dental needs can be taken care of within our clinics.
› We offer dental treatment with sedation and general anesthesia at The Children’s Hospital of Philadelphia for very young children with many cavities, fearful children, or children with special health care needs.
› Cost of treatment in the Penn Dental Medicine Pediatric Clinic is significantly less than a traditional dental office.
› We accept Medicaid and work with most commercially available insurance plans.
